Address: Phu Dinh Ward, Ho Chi Minh City

OBJECTIVE

Full-stack developer with 3+ years of experience building high-volume financial service systems including CRM, call center automation, and document processing platforms. Experienced in Java Spring Boot microservices, ReactJS, and mobile development with Flutter, focusing on scalable backend architecture and workflow automation.

SKILLS

Programming Languages	Java, JavaScript, Python, Dart, Kotlin, Swift
Frameworks	Spring Boot, ReactJS, Flutter, Nextjs, Tailwind
Database & Cache	PostgreSQL, Redis
Others	Docker, Git, Redmine

WORK EXPERIENCE

Nov 2022 - Present

SAIGON BPO LTD

Full Stack Developer

B2B2C Integration Hub

Tech stack: Spring Framework, PostgreSQL, Redis, ReactJS, Message Queue

- Engineered an intermediary gateway for multi-partner data ingestion and normalization.
- Orchestrated bi-directional data sync and transaction workflows across business partners and end-clients.
- Designed a unified data schema to standardize heterogeneous partner formats for downstream systems.
- Ensured data consistency and reliability under asynchronous updates and transactional loads.

CRM System

Tech stack: Spring Framework, PostgreSQL, Redis, ReactJS

- Developed backend services for customer management and loan recovery in financial systems.
- Built REST APIs and integrated with banking systems for real-time customer and card data sync.
- Improved response times via Redis caching and asynchronous processing for high-volume data.
- Managed large-scale financial datasets and multi-partner integrations.

Data Entry System

Tech stack: ReactJS, OCR, Python, Spring Framework

- Built a document processing and record management web app with ReactJS.
- Implemented lazy-loaded PDF viewer, significantly improving performance on large documents.
- Integrated OCR-assisted data extraction, reducing manual entry time and improving accuracy.

Call Center Automation System

Tech stack: Spring Framework, ActiveMQ, TTS, IVR

- Architected automation workflows handling 220,000+ daily calls with high reliability.
- Integrated TTS and IVR technologies, reducing call drop rates and improving customer experience.

Print & Mail Management System

Tech stack: Spring Framework, PostgreSQL, Thymeleaf, Vue.js

- Developed automated document generation and batch distribution system.
- Implemented template-based rendering with carrier logistics integration for end-to-end delivery tracking.

Mobile Field Management App

Tech stack: Kotlin, Swift, Flutter

- Built cross-platform mobile apps enabling field agents to capture leads, submit loans, and log visits.
- Implemented offline-first architecture with seamless CRM synchronization on reconnect.

Jan 2022 - May 2022 **FINTECH DRACO CORPORATION**

ERP System

- Integrated company ERP APIs into a Flutter application, ensuring consistent data flow and performance.
- Delivered new features and resolved application defects based on business requirements.
- Produced technical documentation to support ongoing development and maintenance.

PROJECTS

May 2026 - Present **Box Tools Web**

https://boxtool.org

Built a scalable web platform using Next.js 14 (App Router), TypeScript, and Tailwind CSS. Optimized performance and SEO using dynamic imports for code splitting and Next.js SSR metadata. Developed a custom i18n system (VN/EN) via React Context, structured the architecture with modular routing for scalability, and automated deployments to Cloudflare using GitHub Actions.

EDUCATION

2018 - 2022 **Industrial University of Ho Chi Minh City (IUH)**

Software Engineering
